

CAREER OBJECTIVE

I am a passionate Data Engineer with 3 years of expertise in AWS, Kafka, Databricks, PySpark, and Docker. Skilled in data integration and migration, I excel in developing and optimizing scalable data workflows. I am dedicated to providing efficient, innovative solutions that improve organizational performance. Eager to contribute to the team's success, I am adaptable and committed to continuous learning of new tools and technologies as required by projects. My goal is to leverage my problem-solving skills and technical knowledge to become a valued member of a forward-thinking organization.

EXPERIENCE

Data Engineer Analyst	Accenture – Cigna	Aug 2021 - Present
- Engineered and optimized Python ETL pipelines for data processing tasks, utilizing PySpark and AWS services, ensuring clean, maintainable code aligned with data engineering best practices. - Developed a dashboard to predict customer trends from historical and recent data, providing actionable insights and data-driven decision-making support. - Ensured robust code validation through test-driven development, writing comprehensive test cases to guarantee code functionality before deployment. - Created ETL workflows using PySpark to ingest and transform data from S3, apply complex business logic, and store processed data in S3 and DynamoDB. - Built real-time data consumption applications with millisecond latency, transforming data ingestion from batch to real-time processing, earning accolades for the development. - Designed and implemented a generic Kafka script for seamless data transfer from S3 to designated Kafka topics, facilitating team onboarding and support for the Kafka application. Optimized Glue Job, reducing completion time from hours to under 10 minutes through parallel processing techniques, receiving awards for these efforts. - Established production monitoring by setting up Webex alerts and ticketing to promptly identify and address DAG failures, using the alarm-funnel framework to consolidate alerts. - Migrated Glue jobs to Databricks, optimizing them to leverage Databricks features like Delta Lakes for improved performance and efficiency. - Developed high-volume data ingestion processes using , Spark, and Kafka, ensuring efficient processing and storage in Delta Lake tables, benefiting team scalability and performance. - Developed data quality and governance frameworks in ETL processes, embedding data validation and compliance measures within the AWS infrastructure to maintain data integrity. - Contributed to the deployment and operational monitoring of ETL systems using containerization with Docker, orchestrated via Kubernetes, to promote a reliable data engineering environment. - Maintained a high level of proficiency in Python, employing libraries such as PySpark for data manipulation tasks. - Worked on creating a delta process pipeline to process the Incremental data and publish that to Kafka topic for the multiple downstream applications to use. - Applied Agile methodologies and Test-Driven Development practices throughout the software development lifecycle to solve complex problems in a data-driven team setting. - Stayed current with the latest trends in Data Engineering/Analytics Space, Artificial Intelligence and machine learning to continuously contribute to the of personal and professional		

EDUCATION

Misrimal Navajee Munoth Jain Engineering College (Anna University Affiliated), 2017 –2021

B.Tech. Information Technology

CGPA: 7.59/10

Languages and Technologies

- Python, Pyspark, Pytest, Confluent Kafka API, SQL
- AWS (Glue, ECS, DynamoDB, etc.), Kafka
- Airflow, Databricks, Docker, Snowflake, Splunk
- Windows, Mac, Git

Additional Experience and Awards

- **Databricks Certified Data Engineer - Associate (DEA)** – June 2024
- Received a **Certificate of Appreciation in Accenture** – February 2023
- Received a **Process Champ Award (FY24 Q3)** – June 2024
- Attended trainings on **AWS & Snowflake** in Accenture
- **Programming in Java at NIIT** - score of 90%
- **Developing web apps in JSP at NIIT** - score of 80%
- Member of Rotaract Club and YRC and Donated blood for Red Cross blood bank
